PREFACE TO ROAD LOG

The following tables show lengths of various projects comprising the Montana Federal Aid and Federal Aid Secondary Systems. Supplementing this information are tables showing all other roads constructed by the State or Public Roads Administration and a tabulation showing the lengths of all Forest Highway Routes.

These mileages have been computed to determine route, construction and maintenance lengths, all under the several administrative areas. All construction and contract data are for projects prior to January 1, 1947.

The Log includes data regarding surface type, widths and surface and base thicknesses. Minor changes in these items within a project have not been shown, the predominant characteristics having been used.

All mileages shown, including projects under contract but not completed, the route length, the surface types, widths, and thicknesses shown are those representing the work as it will be when completed, unless there has been a construction change.

Just preceding the tabulation of Route 1 are maps showing the Montana Federal Aid System and the Montana Federal Aid Secondary System.

Column 1 identifies counties, municipalities, Forest Highway routes, junctions and other pertinent points.

Column 2 is for project designation. Also shown is the authority under which the project was constructed.

Column 3 is used as a reference for explanatory notes:

b - Project under construction
d - Data from surveys, through Plans Department
e - Estimated route length
f - Data from Planning Survey Road Inventory
Y & T - Type of junction as shown in accompanying diagrams at the end of the preface.
Other necessary explanatory remarks will be found at the end of each route.

Column 4 shows surface type, the letters designating the surface type being those used in the yearly S. M. Tables and are explained as follows:

A - Primitive Road

An unimproved route (on which there is no public maintenance) usable by 4-wheel vehicles and publicly traveled by small numbers of vehicles.

B - Unimproved Road

A road using the natural surface and maintained to permit bare passability for motor vehicles, but not conforming to the requirements for a graded and drained earth road. The road may have been bladed, and minor improvements may have been made locally.

C - Graded and Drained Earth Road

A road of natural earth slined and graded to permit reasonably convenient use by motor vehicles and drained by longitudinal and transverse drainage systems (natural or artificial) sufficiently to prevent serious impairment of the road by normal surface water, with or without dust palliative treatment or a continuous course of special borrow material to protect the new roadbed temporarily and to facilitate immediate traffic service.

D - Soil-Surfaced Road

A road of natural soil, the surface of which has been improved to provide more adequate traffic service by the addition of (1) a course of mixed soil having A-1 or A-2 characteristics, such as sand-clay, soft shale or topsoil, or (2) an admixture such as bituminous material, portland cement, calcium chloride, sodium chloride, or fine granular material (sand or similar material).

E - Gravel or Stone Road

A road the surface of which consists of gravel, broken stone, slag, chert, caliche, iron ore, shale, chat, disintegrated rock or granite, or other similar fragmental material (coarser than sand) with or without sand-clay, bituminous, chemical or portland cement stabilizing admixture or light penetrations of oil or chemical to serve as a dust palliative.

F - Bituminous Surface-Treated Road

An earth road, a soil-surfaced road, or a gravel or stone road to which has been added by any process a bituminous surface course, with or without a seal coat, the total compacted thickness of which is less than one inch. Seal coats include those known as chip seals, drag seals, plant-mix seals and rock asphalt seals.

G - Mixed Bituminous Road

A road the surface course of which is one inch or more in compacted thickness composed of gravel, stone, sand or similar material, mixed with bituminous material under partial control as to grading and proportions.

H - Bituminous Penetration Road

A road the surface course of which is one inch or more in compacted thickness composed of gravel, stone, sand, or similar material bound with bituminous material introduced by downward or upward penetration.

I - Bituminous Concrete, Sheet Asphalt or Rock Asphalt Road

A road on which has been constructed a surface course one inch or more in compacted thickness consisting of bituminous concrete or sheet asphalt, prepared in accordance with precise specifications controlling gradation, proportions and consistency of composition, or of rock asphalt. The surface course may consist of combinations of two or more layers such as a bottom and a top course, or a binder and a wearing course.

J - Portland Cement Concrete Road

A road consisting of portland cement concrete with or without a bituminous wearing surface less than one inch in compacted thickness.

K - Brick Road

A road consisting of paving brick with or without a bituminous wearing surface less than one inch in compacted thickness.

L - Block Road

A road consisting of stone block, wood block, asphalt block or other form of block, except paving brick, with or without a bituminous wearing surface less than one inch in compacted thickness.

M - Combination Type Road

A road the wearing course of which consists of two or more individual types each being of such depth as to be classed logically as a part of the traffic bearing road surface rather than as surfaced shoulders.

Bridges

Structures of over 20 foot span, including both stream crossings and grade separations

Z - This indicates that a bridge constitutes the entire project.

Column 5 shows compacted surface thickness carried to the closest one-half inch. For dual-types (M), the thickness of center portion of the road is used.

Column 6 shows base thickness, the thickness shown being a compacted weighted average over the entire section.

Columns 7 & 8 give the surface and roadway widths.

Column 9 shows route or centerline length of each project and is further explained with the junction diagrams.

Column 10 shows actual construction or maintenance length along the route.

Column 11 shows the surveyed or estimated length of unimproved sections.

Column 12 is for recording lengths of additional wyes at junctions. Any mileage therein should be added to that in Column 10 to obtain the maintenance length.

Column 13 to 17, inc. show the administrative area under which each section lies. (Municipal mileage is all mileage lying within city limits of incorporated cities, rural mileage being that lying outside of such limits).

Column 18 tabulations coincident mileage, that is, two routes traverse identical alignment. Coincident mileage is included in the route having the smaller number.

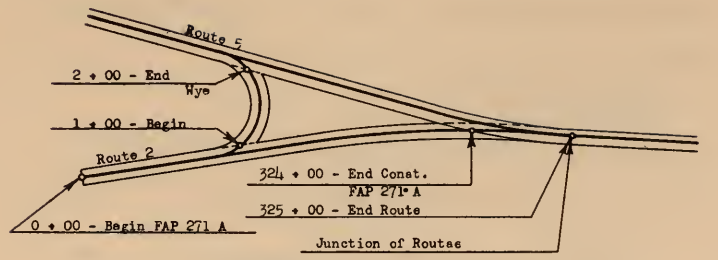
Column 19 shows the mileage along the accumulated route as of January 1, 1947.

JUNCTION DIAGRAMS

Y and T, as noted in Remarks Column of the Road Log, have reference to the type of road junction.

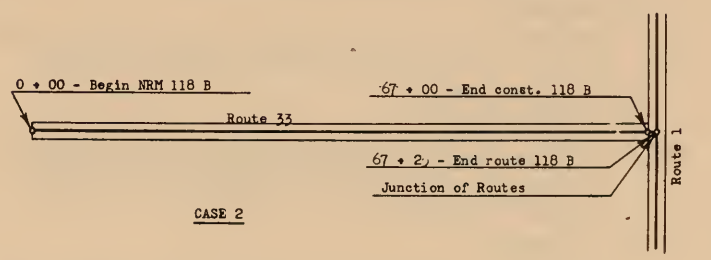
The accompanying diagrams explain our method used in calculating route and construction lengths of various projects.

In Case 1, that of a "Y" junction, the construction or maintenance length of FAP 271 A is from Station 0 + 00 to Station 324 + 00, plus the Wye from Station 1+ 00 to 2 + 00. The route length is from Station 0 + 00 to Station 325 + 00.



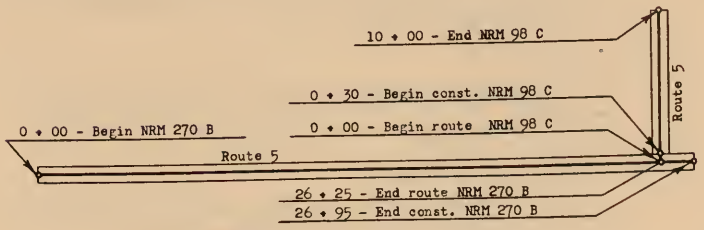
CASE 1

In Case 2, that of a "T" junction, the construction or maintenance length of NRM 118 B is from Station 0 + 00 to Station 67 + 00. The route length is from Station 0 + 00 to Station 67 + 25.



CASE 2

In Case 3, a "T" connection all on one route, the construction length of NRM 270 B is from Station 0 + 00 to Station 26 + 95, while the construction length of NRM 98 C is from Station 0 + 30 to Station 10 + 00. The route length of NRM 270 B is from Station 0 + 00 to Station 26 + 25, and the route length of NRM 98 C is from Station 0 + 00 to Station 10 + 00.



10 + 00 - End NRM 98 C
0 + 30 - Begin const. NRM 98 C
0 + 00 - Begin NRM 270 B
0 + 00 - Begin route NRM 98 C
Route 5
26 + 25 - End route NRM 270 B
26 + 95 - End const. NRM 270 B
Route 5
